SUMMARY

Full stack and DevOps engineer with hands-on experience across cloud infrastructure, agentic AI and Web3. Builds and automates workloads on AWS and Azure with Terraform, Kubernetes and CI/CD, develops LLM-powered agents using MCP, RAG and AWS Bedrock, and ships full stack applications with React, Next.js, Node.js and .NET alongside smart contracts in Solidity. A fast learner with a strong eye for design and UX, and a collaborative teammate who has led and worked with diverse teams.

SKILLS

- **Cloud and Infrastructure:** AWS (EC2, ECS, EKS, ECR, Lambda, S3, VPC, IAM, Cognito, RDS, ALB, CloudFormation, CloudWatch), Microsoft Azure, Infrastructure as Code (Terraform, Ansible), Kubernetes, Helm, Docker, Docker Compose
- **DevOps and Systems:** CI/CD (GitHub Actions, Jenkins, GitLab), Git, JFrog, Datadog, Linux, Bash, Networking
- **Agentic AI:** AWS Bedrock (AgentCore, Knowledge Bases), AWS DevOps Agent, MCP servers, RAG, LangChain, LiteLLM, OpenWebUI, vector databases on AWS, prompt engineering
- **Languages:** Python, TypeScript, JavaScript, Java, C#, SQL, Solidity, Cairo, Move, Dart
- **Full Stack:** React, Next.js, Angular, Node.js, Express, .NET (ASP.NET Core), Flask, Django, Flutter, TailwindCSS, REST APIs, GraphQL, OAuth, JWT
- **Databases:** PostgreSQL, SQL Server, MySQL, MongoDB, Supabase, Prisma
- **Blockchain:** Foundry, Hardhat, Ethers.js, Web3.js, The Graph, Chainlink, ENS, Starknet and Dojo, Farcaster Frames
- **Tools:** Postman, Vercel, Figma, Unity, Blender, ModelizeIT
- **Practices:** Agile, Microservices

EXPERIENCE

Presidio | Associate Engineer | Oct 2025 – Present | Chennai, Tamil Nadu

- **FinOps AI agent for cloud architecture review (Jun 2026 – Present):** Implemented an AI agent for an enterprise client that reviews proposed cloud architectures before they are provisioned, estimating AWS costs and checking designs against governance standards. Contributed to the solution design, then built and deployed the platform: an OpenWebUI chat interface and LiteLLM gateway on EKS with Bedrock, MCP servers for AWS pricing and internal knowledge, and Terraform and Helm deployments aligned to the client's CI. Hardened it with JFrog images, scoped IAM access to Bedrock models and draft guardrails.
- **Azure assessment and pilot migration (Apr 2026 – Present):** Used ModelizeIT, an automated discovery and dependency-analysis platform for cloud migration planning, to map applications and affinity groups across the Americas and EMEA for a global enterprise client. Contributed to the master inventory of 1,600+ servers and analyzed it against multiple parameters to group servers into migration waves. Took part in the pilot migration to Azure (Waves 1 to 6).
- **Agentic AI proofs of concept and pre-sales (Feb – Jul 2026):** Built about five AI agent proofs of concept on AWS Bedrock AgentCore and presented them in demos to the pre-sales team for customer pitches. The agents include a DevOps agent, a Terraform infrastructure-as-code (IaC) agent, a GitLab integration agent and a Kubernetes operations agent for EKS, backed by secured MCP servers (AWS API, GitLab, Cognito JWT) and RAG with Bedrock Knowledge Bases. Researched the available Bedrock models to select the right one for each task. The demos were credited with helping win two customer engagements.
- **Cloud discovery and migration planning (Jan 2026 – Present):** Delivered ModelizeIT demos for three international clients and guided them through application mapping, affinity grouping, wave planning and inventory analysis. Created an onboarding curriculum that got new and senior engineers productive quickly.

- **EKS observability POC (Feb 2026):** Built a fleet observability and compliance proof of concept on AWS with an Amazon Quick Suite (QuickSight) dashboard pipeline and a Datadog custom AMI-age check. Compared two CloudWatch-to-Quick Suite designs and produced reusable runbooks.
- **Knowledge sharing:** Presented a technical talk on the AWS DevOps Agent (Jun 2026), documented the AI proofs of concept for reuse by later teams, and supported engineers across projects.

Presidio | Intern | Apr 2025 – Oct 2025 | Chennai, Tamil Nadu

- Completed a six-month training program in full stack development and DevOps: SQL Server and PostgreSQL, C# and ASP.NET Core APIs, Angular, design patterns and unit testing, with Razorpay payment and Azure Blob Storage integrations, documented in a public repository. Alongside it, learned AWS, Microsoft Azure, Bash scripting and networking.

Crafted With Love | Software Developer Intern | Aug 2024 – Oct 2024 | Remote

- Revamped the AlienWardrobe eCommerce fashion platform with Next.js, improving performance and user experience.
- Managed the database and CI/CD on AWS Amplify, and built API routes and Prisma schemas for data management.

OpenWeaver | Studio Developer Intern | Feb 2024 – Mar 2024 | Chennai

- Built customized client websites on the low-code OpenWeaver Studio, gathering requirements directly from clients and delivering tailored, high-quality sites.

PROJECTS

- **ENS Drive (Sep 2026):** Google Drive-style sharing for ENS names. A team contract holds a role and its members inherit it on every name below, across nested folders, checked live on-chain. Built with Solidity (Foundry), ENSv2 and Next.js; live on Sepolia with 71 tests and symbolic proofs. Second prize, ENS track, ETHGlobal Tokyo.
- **Perjury (Sep 2026):** Verification layer for AI agent claims. Agents post bonded claims, a randomly assigned peer agent re-derives the result, a Chainlink CRE confidential workflow adjudicates privately, and ENS records reputation that only the protocol can write. Uses Solidity, Chainlink VRF and CRE, The Graph and TypeScript; runs end to end on Sepolia. Submitted to ETHOnline.
- **Token Defense (Mar 2026):** Fully on-chain tower defense game on Starknet where players defend an AI inference cluster from prompt-injection attacks. Tower placement, wave simulation and scores all run on-chain, and autonomous agents can play through an API. Uses Cairo and Dojo, React and TypeScript, with Embeddable Game Standard integration.
- **SwapYourSuiiii (Jul 2025):** Cross-chain token swaps between EVM chains and Sui, built on the 1inch Limit Order Protocol with a custom resolver, Move HTLC escrow contracts for safe settlement and a Next.js relayer app. 5th place, 1inch track, ETHGlobal Unite DeFi.
- **Quizup (2025):** Learning management and evaluation system (LMES) built as a full stack project, with an Angular frontend and a .NET backend.
- **SnapAds (Apr 2025):** AI-powered ad platform on Polygon that lets users watch ads instead of paying gas fees. A MetaMask Snap shows a relevant ad during a transaction, and an ERC-4337 Paymaster contract reimburses the gas fee from the advertiser's funds once the ad is watched. AI agents match ads to spots; built with Solidity, MultiBaas, IPFS and the Covalent AI Agent SDK. Winner, Polygon Real World Anything track, ETHGlobal Taipei.
- **FleetIQ (2024):** Co-founded and led technology as CTO for a SaaS product for transport service management, covering fleet operations, tracking and maintenance for transportation businesses.

ACHIEVEMENTS

- **50+ hackathons:** Over $20,000 in prize money, a Mac mini (OpenClaw Hack) and $5,000 in Amazon credits.
- **7 ETHGlobal hackathons:** Agentic Ethereum (Covalent track winner), Taipei (Polygon track winner), Unite DeFi (1inch track, 5th place), New Delhi, Open Agents, ETHOnline and Tokyo (ENS track, 2nd place).

- **4 Starknet hackathons:** Winter Hackathon, Re{solve}, Dojo Game Jam VII and Dojo Game Jam VIII (3rd place).
- **Spot Award, Presidio (Jul 2026):** Internal recognition for delivering agentic AI proofs of concept and customer demos within six months.
- **Best Project and Best Paper (2023):** "An Overview of Tangled," presented at SeedBrains, Cambridge Institute of Technology, Bangalore, India.
- **Mentoring:** Guided a team of 5 first-year students to a top 10 finish at Envision 2023, a LICET prototype-building event.
- **President, FLAIR 2k24:** Led the symposium of the Information Technology department at Loyola ICAM College of Engineering and Technology (LICET), managing 10 committees, 11 core members and 50+ student volunteers to deliver the event.

CERTIFICATIONS

- **AWS Certified AI Practitioner (Jan 2026):** Amazon Web Services certification covering AI, machine learning and generative AI fundamentals, responsible AI and AWS AI services such as Amazon Bedrock.
- **Ansible Enablement Program:** Training in infrastructure automation and configuration management with Ansible.
- **AI Enablement Program:** Training in applying AI tools and agentic workflows to engineering work.

EDUCATION

- **B.Tech, Information Technology (2021 – 2025):** Loyola ICAM College of Engineering and Technology (LICET), Chennai, Tamil Nadu. CGPA 8.4
- **HSC (2019 – 2021):** Jaigopal Garodia Matric. Hr. Sec. School, Chennai, Tamil Nadu. 92%
- **SSLC (May 2018):** Ponnuswamy Matric. Hr. Sec. School, Chennai, Tamil Nadu. 90%
